flask with 98 % nitrogen, 35 CO2 gas mixture for 1 hour prior to harvesting for RNA isolation (as per Quinn UN Barraco P. Eriksson M, Merchant S. Quinn et al. (2000) JBC 275:6080-6089; CC-1650 cells grown to mid-log phase (3x10e6 cells/ml) in TAP medium in a shaking (150 rpm) illuminated (70 mole photon/m2/sec) incubator at 27 C. Cells were diluted to 1x10e6 cells/ml, transferred to high light (11000 mol photon/m2/s) with shaking (150 rpm) and sampled at (0.5, 1,2,4,6,12 hrs), CC-1690 cells grown to mid-log phase in H8 medium in a shaking (150 rpm) and sampled at (0.5, 1,2,4,6,12 hrs), CC-1690 cells grown to mid-log phase in H8 medium in a shaking (150 rpm) and illuminated (70 mole photon/m2/sec) incubator at 27 C. Cells were diluted to 1x10e6 cells/ml, transferred to high light (11000 mol photon/m2/s) with shaking (150 rpm) and sample, pooled and cDNA synthesized (see Shrager et al, Plant Physiol. 131, 401-408 for details). The cDNA was directionally cloned into lambda Zap II (Stratagene) in the ECORI (5.7) and Xhori (3) sites, pluescript II SK-
                            1:736-757) in a shaking illuminated incubator (same conditions as above). CC-1690 cells were grown to mid-log phase in TAP medium in a shaking illuminated incubator to a density of 8x106 cells/ml. The flask was transferred to a shaking platform (200 rpm) at room temperature (230) 12 micromole/m2/sec illumination and bubbled in a stoppered
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                plasmids were excised from the lambda ZAP clones by
superinfection with ExAssist (Stratagene) phage. The
library was normalized using method 4 described in Bonaldo
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   199
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               559

/note="Vector: pBluescript II SK-; Site 1: EcoRI; Site_2: Knoi; Stress condition III library, constructed by Jeanette Quinn and Chinang-Wen Chang, combines cDNAs from Cc-1690 cells grown to mid-log phase in copper-free TAP medium (see Quinn and Merchant (1998) Methods in Enzymology, 2997:263-279) in a shaking (150 pm) illuminated (about 100 micromolog/m2/sec) incubator at 22 C (see Quinn and Merchant (1998) Methods in Enzymology, 2997:263-279); CC-1690 cells grown to mid-log phase in low Fee (1 micromolar Fe) TAP medium (see La Pontaine S, Quinn JM, Naxamoco SS, Page MD, Gohre V, Moseley JL, Kropat J, Merchant S.Lafontaine et al. (2002) Eukaryotic Cell, 1373-757) in a shaking illuminated incubator (same conditions as above): CC-1690 cells were grown to mid-log phase in TAP medium in a shaking illuminated incubator to a shaking platform (200 rpm) at room temperature (23C) 12 micromole/m2/sec illumination and bubbled in a stoppered flask with 98% nitrogen, 2% CO2 gas mixture for 1 hour prior to harvesting for RNA isolation (as per Quinn JM, Barraco P, Eriksson M, Merchant S. Quinn et al. (2000) JBC 275:680-6689); CC-1690 cells grown to mid-log phase (3x10e6 cells/m1) in TAP medium in a shaking (150 rpm) illuminated (70 mole photon/m2/sec) incubator at 27 C
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Cells were diluted to 1x10e6 cells/ml, transferred to high light (11000 ml) photon/m2/s) with shaking (150 rpm) and sampled at (0.5, 1,2,4,6, 12 hrs); CC-1690 cells grown to mid-log phase in HS medium in a shaking (150 rpm)
                                                                                                                                                                                                                                                                                            CF565551 629 bp mRNA linear EST 23-SEP-2003 1115101B09.xl C. reinhardtii CC-1690 (mt+), Stress III (normalized), Lambda Zap II Chlamydomonas reinhardtii cDNA 3', mRNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              illuminated (70 mole photon/m2/sec) incubator at 27 C.
Cells were diluted to 1x10e6 cells/ml, transferred to high

/db xref="taxon:3055" (Jone 11b="C-1690 (mt+), Stress III (normalized), Lambda Zap II" (stress condition III library, constructed by Jeanete Quinn and Chiung wen chang, combines cDNAs from Jeanete Quinn and Merchant (1998) Methods in copper-free Tap medium (see Quinn and Merchant (1998) Methods in Enzymology, 2997:263-279); normalized about 100 micromole/m2/sec) incubator at 22 C (see Quinn and Merchant (1998) Methods in Bnzymology, 2997:263-279); CC-1690 cells grown to mid-log phase in low Fe (i micromolar Fe) TAP medium (see La Fontaine S, Quinn JM, Nakamoto SS, Page MD, Gohre V, Moselby Ju, Kropat J, Maxamoto SS, Page MD, Gohre V, Moselby Ju, Kropat J, I:736-757) in a shaking illuminated incubator (same conditions as above). CC-1690 cells were grown to mid-log phase in TAP medium in a shaking illuminated incubator (and density of 8x10e6 cells/m1. The flask was transferred to a shaking jlatform (200 pm) at room temperature (23C) 12 micromole/m2/sec illumination and bubbled in a stoppered flask with 98% nitrogen, 2% CC2 gas mixture for 1 hour prior to harvesting for RNA isolation (as per Quinn JM, Barraco P, Eriksson M, Merchant S. Quinn et al. (2000) JRC 275:6080-6089); CC-1690 cells grown to mid-log phase in HS medium in a shaking (150 rpm) illuminated (10 mole photon/m2/sec) incubator at 27 C. Cells were diluted to 1x10e6 cells/m1, transferred to high light (11000 mol photon/m2/sec) incubator at 27 C. Cells were diluted to 1x10e6 cells/m1, transferred to high light (11000 mol photon/m2/sec) incubator at 27 C. Cells were diluted to 1x10e6 cells/m1, transferred to high light (11000 mol photon/m2/sec) incubator at 27 C. Cells were diluted to 1x10e6 cells/m1, transferred to high light (11000 mol photon/m2/sec) incubator at 27 C. Cells were diluted to 1x10e6 cells/m1, transferred to high light (11000 mol photon/m2/sec) second sample at (0.5, 1,2,4,6, 1,2 hrs); PolyA mRNA was directionally cloned an
Chlamydomonadaceae, Chlamydomonas.

light (11000 mol photon/m2/s) with shaking (150 rpm) and sampled at (0.5, 1,2,4,6, 12 hrs). PolyA mRNA was purified from each sample, pooled and cDNA synthesized (see Shrager et al, Plant Physiol. 131, 401-408 for details). The cDNA was directionally cloned into lambda Zap II (Stratagene) in the EcoRI (5') and XhoRI (3') sites. pBluescript II SK-plasmids were excised from the lambda ZAP clones by superinfection with ExAsist (Stratagene) phage. The library was normalized using method 4 described in Bonalde et al., (1996) Genome Research 6: 791-806."

flask with 98% nitrogen, 2% CO2 gas mixture for 1 hour prior to harvesting for RNA isolation (as per Quinn JW, Barraco P. Eriksson M, Merchant S. Quinn et al. (2000) JBC 275:6080-6089); CC-6500 cells grown to mid-log phase (3x10e6 cells/ml) in TAP medium in a shaking (150 rpm) illuminated (70 mole photon/m2/8ec) incubator at 27 C. Cells were diluted to 1x10e6 cells/ml, transferred to high light (11000 mol photon/m2/s) with shaking (150 rpm) and sampled at (0.5, 1,2,4,6, 12 hrs); CC-1590 cells grown to mid-log phase in HS medium in a shaking (150 rpm) illuminated (70 mole photon/m2/sec) incubator at 27 C. Cells were diluted to 1x10e6 cells/ml, transferred to high light (11000 mol photon/m2/s) with shaking (150 rpm) and sampled at (0.5, 1,2,4,6, 12 hrs). PolyA mRNA was purified from each sample, pooled and cDNA synthesized (see Shrager et al, Plant Physiol. 131, 401-408 for details). The cDNA was directionally cloned into lambda Zap II (Stratagene) in the ECORI (5.) and XhORI (2.) sites, pluescript II SK-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         plasmids were excised from the lambda ZAP clones by
superinfection with ExAssist (Stratagene) phage. The
library was normalized using method 4 described in Bonaldo
et al., (1996) Genome Research 6: 791-806."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               CGACCCGTAACGATCAGCTTGGTGCTGGTGCGTTCGGTGGTTACCAGGTTAACCCGTACC 187

XhoI; Stress condition III library, combines cobMas from
Jeanette Quinn and Chiung-Wen Chang, combines cobMas from
CC-1690 cells grown to mid-log phase in copper-free TAP
medium (see Quinn and Merchant (1998) Methods in
Enzymology, 2997:262-279) in a shaking (250 rpm) illuminated
(about 100 micromole/m2/sec) incubator at 22 C (see Quinn
and Merchant (1998) Methods in Enzymology, 2997:63-279);
CC-1690 cells grown to mid-log phase in low Fe (I
micromolar Fe TAP medium (see La Fontaine S, Quinn JM,
Nakamoto SS, Page MD, Gohre V, Moseley JL, Kropat J,
Merchant S.Lasfontaine et al. (2002) Eukaryotic cell,
1:736-757) in a shaking illuminated incubator to
a phase in TAP medium in a shaking illuminated incubator to
a conditions as above). CC-1690 cells were grown to mid-log
phase in TAP medium in a shaking illuminated incubator to
a shaking platform (200 rpm) at room temperature (23C) 12
micromole/m2/sec illumination and bubbled in a stoppered
flack with one illumination and bubbled in a stoppered
flack with one illumination and bubbled in a stoppered

filask with 98% nitrogen, 2% CO2 gas mixture for 1 hour prior to harvesting for RNA isolation (as per Quinn by Barraco P, Erikeson M, Merchant S. Quinn et al. (2000) JBC 275.6080-6089), CC-1690 cells grown to mid-log phase (3x10e6 cells/ml) In TAP medium in a shaking (150 rpm) illuminated (70 mole photon/m2/sec) incubator at 27 C. Cells were diluted to 1x10e6 cells/ml, transferred to high light (11000 mol photon/m2/s) with shaking (150 rpm) and sampled at (0.5, 1,2,4,6, 12 hrs); CC-1690 cells grown to mid-log phase in HS medium in a shaking (150 rpm) and simpled at (0.5, 1,2,4,6, 12 hrs); CC-1690 cells grown to light (11000 mol photon/m2/s) with shaking (150 rpm) and illuminated (70 mole photon/m2/sec) incubator at 27 C. Cells were diluted to 1x10e6 cells/ml, transferred to high light (11000 mol photon/m2/sec) incubator at 27 C. cells were diluted to 1x10e6 cells/ml, transferred to high sampled at (0.5, 1,24,6, 12 hrs). PolyA mRNA was purified from each sample, pooled and cDNA synthesized (see Shrager et al., Plant Physiol. 131, 401-408 for details). The cDNA was directionally cloned into lambda Zap II (Stratagene) in the EcoRI (5) and XhoRI (3) sites pBluescript II SK-plant property control of the property of the part of 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 superinfection with ExAssist (Stratagene) phage. The
library was normalized using method 4 described in Bonaldo
et al., (1996) Genome Research 6: 791-806."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ò
           a chaking platform (200 rpm) at room temperature (230) 12
micromols/m2/sec illumination and bubbled in a stoppered
flask with 98t nitrogen. 28 cO2 gas mixture for 1 hour
prior to harvesting for RNA isolation (as per Cuinn JM,
Barraco P, Eriksson M, Merchant S. Quinn et al. (2000) JBC
275:608-6089); CC-1690 cells grown to mid-10g phase
(3x1066 cells/m1) in TAP medium in a shaking (150 rpm)
illuminated (70 mole photon/m2/sec) incubator at 27 C.
Cells were diluted to 1x1066 cells/m1, transferred to high
light (11000 mol photon/m2/s) with shaking (150 rpm) and
sampled at (0.5, 1,2,4,6, 12 hrs); CC-1690 cells grown to
mid-10g phase in HS medium in a shaking (150 rpm)
illuminated (70 mole photon/m2/sec) incubator at 27 C.
Cells were diluted to 1x1066 cells/m1, transferred to high
illuminated (70 mole photon/m2/sec) incubator at 27 C.
Cells were diluted to 1x1066 cells/m1, transferred to high
light (11000 mol photon/m2/sec) incubator at 27 C.
Cells were diluted to 1x1066 cells/m1, transferred to high
sampled at (0.5, 1,2,4,6, 12 hrs). PolyA mRNA was purified
from each sample, pooled and cDNA synthesized (see Shrager
et al, Plant Physiol 131, 401-408 for details). The cDNA
was directionally cloned into lambda Zap II (Stratagene)
in the ECORI (5) and XhoRI (3) sites. pBluescript II SK-
plasmids were excised from the lambda Zap II (Stratagene)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 bE442396

treated with T4 DNA polymerase, and purified by treated with T4 DNA polymerase, and purified by ethanol-precipitation. The cDNAs were ligated to Lone-linker Lib-Sal4, purified by phenol/chloroform, and separated from free linkers by Centricon 100. Then, the CDNAs were amplified by long-range high fidelity PCR using Ex Taq polymerase (Takara) with a primer Sal4-S. The products were purified by phenol/chloroform and Centricon 100. The cDNAs were digested with Sal1 and Not1 enzymes and cloned into Sal1/Not1 site of pCMV-SPORT6 plasmid vector. The DH10B E. coli host was transformed with the ligation mixture by the standard chemical method. The average insert size is about 2.5 kb. The library was constructed by Yulan Piao."
                                                                                                                                                                                      /note="Vector: pCMV-SPORT6 (Invitrogen); Site_1: Sal1; Site_2: Not1; Mouse cDNA project by the Laboratory of Genefics, National Institute on Aging (NIA), Intramural Research Program, NIH (http://lgsun.grc.nia.nih.gov/cDNA). This is a long-transcript enriched cDNA library (Ref. Genome Res. 11: 1553-1558 (2001). [PMID: 11544199]). Total RNAs were extracted from a pool of 1488 unfertilized eggs. Double-stranded cDNAs were synthesized with an Oligo(dT)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö

National Institute on Aging (NIA), Intramural Research Program, NIH (http://lgaun.grc.nia.nih.gov/cDNA). This is a long-transcript enriched cDNA library (Ref. Genome Res. 11: 1553-1558 (2001). [PMID: 11544199]). Total RNAs were extracted from a pool of 1488 unfertilized eggs. Double-stranded cDNAs were synthesized with an oligo(dT)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       treated with T4 DNA polymerase, and purified by ethanol-precipitation. The CDNAs were ligated to Lone-linker LL-Sal4, purified by phenol/Chloroform, and separated from free linkers by Centricon 100. Then, the CDNAs were amplitied by long-range high fidelity PCR using Ex Tag polymerase (Takara) with a primer Sal4-S. The products were purified by phenol/Chloroform and Centricon 100. The CDNAs were digested with Sal1 and NotI enzymes and cloned into Sal1/NotI site of pCMV-SPORT6 plasmid vector. The DH10B E. coli host was transformed with the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                EST 01-OCT-2003
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 814
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CTGAGAAACGTGCTCAGTCCGTTGTTGACTACCTGGTTGCTAAAGGCATCCCGGCTGGCA 874

/note="Vector: pSPORTI; Site 1: Sal I (5'end); Site 2: Not all (3'end); Tardigrades (also know as water bears) are amal free living animals inhabiting marine, fresh water and water film habitats. Hypsibius dujardini is a freshwater species maintained in lab culture (source strain Sciento 215). The library was prepared from adults and juveniles and was constructed in pSPORTI vector (Superscript, Invitrogen) using GeneRacer (Invitrogen) Bdinburgh. Sequencing was performed by Frances Thomas, University of Edinburgh."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   814

US-10-416-708A-26

US-10-416-708A-26

Sequence 26, Application US/10416708A

Publication No. US20040161753A1

GENERAL INFORMATION:

APPLICANT: Wise, John

TITLE OF INVENTION: CREATION AND IDENTIFICATION OF PROTEINS HAVING NEW DNA BINDING

TITLE OF INVENTION: SPECIFICITIES

TITLE OF INVENTION UMBER: US/10/416,708A

CURRENT APPLICATION NUMBER: US/10/416,708A

CURRENT FILING DATE: 2004-01-28

NUMBER OF SEQ ID NOS: 89

SOFTWARE: PatentIn version 3.2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            OTHER INFORMATION: Plasmid derived from pComp containing a flag tag separator gene

Patent No. 6610836
GENERAL INFORMATION:
Facett No. 6610836
GENERAL INFORMATION:
FAPLICANT: GATY Breton et. al
APPLICANT: GATY Breton et. al
TITLE OF INVENTION:
FILLE REFERENCE: 2709.2004001
CURRENT APPLICATION NUMBER: US/09/489,039A
CURRENT FILING DATE: 2000-01-27
PRIOR FILING DATE: 1999-01-29
NUMBER OF SEQ ID NOS: 14342
SEQ ID NO 280
                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                134

Sequence 13, Application US/09654289

Patent No. 6410030

GENERAL INFORMATION:
APPLICANT: BAILS, Hans
APPLICANT: Trudel, Michel

TITLE OF INVENTION: SPRINGE FRAGMENT OF RESPIRATORY

TITLE OF INVENTION: SYNCYTIAL VIRUS PROTEIN G, IMMUNOGENIC AGENT, PHARMACEUTICAL

TITLE OF INVENTION: COMPOSITION CONTAINING IT AND PREPARATION PROCESS

NUMBER OF SEQUENCES: 75

CORRESPONDENCE ADDRESS:

ADDRESSEE: Gordon W. Hueschen
                                                                                                                                                                                                                                                                         420
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                807
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       987
